Daily Expense Tracker Project Synopsis

Introduction

The Daily Expense Tracker is a web-based application designed to help users manage their daily expenses efficiently. It provides a user-friendly interface for tracking income and expenditures, ensuring better financial planning.

Objectives

- To provide a simple and intuitive platform for tracking daily expenses.
- To enable users to categorize and analyze their spending habits.
- To assist users in maintaining a budget and achieving financial goals.

Methodology

- **Frontend**: Developed using HTML, CSS, and Bootstrap for responsive design.
- **Backend**: PHP is used for server-side scripting and database interactions.
- **Database**: MySQL is used to store user data, including expenses and income records.
- **Authentication**: Secure login and registration system with password encryption.

Features

- User registration and login system.
- Add, edit, and delete daily expenses.
- Categorization of expenses for better analysis.
- Dashboard to view expense summaries and trends.
- Password recovery functionality.

Future Enhancements

- Integration with mobile applications for better accessibility.
- Advanced analytics and reporting features.
- Multi-currency support for global users.
- Integration with third-party payment systems for automated expense tracking.

Conclusion

The Daily Expense Tracker is a practical solution for individuals looking to manage their finances effectively. With its user-friendly interface and robust features, it simplifies the process of tracking and analyzing expenses, paving the way for better financial management.
